ADMIN QUICK GUIDE · SHIPBOTS

Scan to create training orders

autobagger-barcode-printer-picker-t.vercel.app

Works on any phone or computer. No login. Every order lands in ShipHero under the **SHIPBOTS** account.

1 Create orders

Open the link. Pick a **preset**, set items, or choose **Random mix**. Type how many orders. Tap **Create**.

2 Find them in ShipHero

Customer: **SHIPBOTS**
Status: **Training**
Orders are named **TEST-TRAINING-###**, shipping to **TEST TEST**.

3 Pick like a real order

Trainee picks from the **TRAIN** bins into a tote, scanning the wrapper barcodes. **Never print a shipping label.**

4 Cleanup is automatic

30 min after the last pick the bins restock and the orders cancel themselves. In a hurry? Tap **Reset station** on the page.

Bin map

Keep 4 of each in its bin. Labels face the aisle.

Peanut M&M's	B-01
KitKat	B-02
Hubba Bubba Bubble Tape	B-03
Hershey's King Size	B-04
Butterfinger	A-01
Trident White Spearmint	A-02

Nothing ships. Training orders are addressed to our own warehouse, so a label printed by mistake comes right back.

Running low? Put candy back in the bin — ShipHero still counts 4.
